EDUCATION

Ramaiah Institute of Technology

Bachelor of Engineering in Computer Science Engineering (AIML)

- CGPA: 8.42 / 10.0

Bengaluru, Karnataka

Oct. 2023 – Present

SKILLS

Programming Languages: Java, Python, C, SQL

Technologies: Git, Linux, Jupyter, VS Code

Core Computer Science: Database Management Systems, Computer Networks, Operating Systems, Machine Learning Pipelines, Object-Oriented Programming

Core Competencies: Problem Solving (DSA), Machine Learning Projects

Soft Skills: Critical Thinking, Team Collaboration, Project Planning, Communication, Time Management

PROJECTS

Aetherquant | Deep Learning Stock Forecasting & Backtester

Python, PyTorch, Pandas, Vite, CSS, HTML

Jan. 2026 – Feb. 2026

- Engineered an end-to-end quantitative research framework to train and evaluate sequence networks for predicting financial time-series data.
- Implemented and compared multivariate LSTM, GRU, Bahdanau Temporal Attention-LSTM (Seq2Seq), and Multi-Head Self-Attention Transformers in PyTorch against traditional Auto-ARIMA and Holt-Winters baselines.
- Built a real-time web cockpit with an asymmetric 12-column bento grid, glassmorphism UI, a kinetic self-attention node canvas, and dynamic heatmaps visualising self-attention weights.
- Developed a rolling backtesting simulation engine to calculate critical risk metrics (Sharpe Ratio, Max Drawdown, Win Rates) using NSE market data fetched via `yfinance`.

Real-Time Collaborative Kanban Board

React, Node.js, Express, MongoDB, Socket.io, Redux Toolkit, Tailwind CSS

May 2026 – Jun. 2026

- Engineered a full MERN-stack collaborative workspace enabling drag-and-drop card management with instant state synchronisation across all connected clients.
- Integrated Socket.io to establish low-latency WebSocket communication, powering real-time board updates and live collaborator presence indicators.
- Designed a glassmorphism dark-mode UI with snappy drag-and-drop mechanics via `@hello-pangea/dnd` and optimistic UI updates powered by TanStack React Query.
- Implemented user authentication using JWT access/refresh token rotation with HTTP-only cookies and secure password hashing via `bcrypt.js`.

CI/CD Pipeline Automation with Docker and Azure DevOps

GitHub Actions, Azure DevOps, Docker, Docker Hub, Vercel

Mar. 2026

- Built and automated a complete CI/CD pipeline using GitHub Actions and Azure DevOps for seamless application delivery.
- Implemented Docker-based containerization with automated image build and push to Docker Hub.
- Configured automated deployment of the frontend using Vercel for continuous delivery.
- Integrated ESLint and Prettier into the pipeline to enforce code quality, consistency, and maintainable development practices.
